Container	1 bowl with 2 brands mixed No plastic as it promotes toxins Use glass, ceramic or metal Completely wash at least every 3 days	1 bowl No plastic as it promotes toxins Use glass, ceramic or metal Completely wash daily	Sturdy nonspillable bowl No plastic as it promotes toxins Use glass, ceramic or metal Completely wash daily
Serving Size	1 cup (kitten should eat 1/4 to 1/2 per day)	2.5 to 3 oz. Served in a.m. & 2.5 to 3 oz. Served in p.m.	1 to 2 cups
Storage	Keep in sealed container Refrigerate 1 week quantity Freeze larger quantities	If using the 5.5 oz. size, store in refrigerator for 1 day only	Room temperature
Caution	Do not feed regular Iams or Science diet due to preserved ingredients used & kitten's toxic build up that can cause liver & kidney damage which may shorten the cat's lifespan significantly	In rare circumstances, a kitten shows an allergic reaction to wet food such as swollen lips, constant throwing up, dry flaky skin, etc. A vet should be consulted for a special dry diet.	Ensure that household cleaners & aerosols do not come into contact
Protocol	Kittens must eat some dry food daily It carries more nutrition than wet food	It is desirable for kittens to eat wet food daily up to 1 yr. of age	
Note	If a kitten lives with an adult cat and two separate feeding regimes is difficult, then give the free feeding adult dry to both and ensure that the kitten gets something in kitten like the wet food, which can be served separately and privately so as to exclude the adult eating kitten. A kitten requires some kitten as it contains extra fat and protein needed for growth.
